

Fibrous casing:

NEW HANKO SIZE 62

New Hanko size is born

ViskoTeepak wants to meet customer demands and manufacture products that perfectly fit our customer's specific production processes. Due to increased interest and customer demands in Fibrous medium-sized casings, we agreed that the gap between existing Hanko size 60 and 65 was too big. If Hanko size 60 is too small and size 65 is too large, we are excited to announce today that size 62 is also available from Hanko. The product has already been tested and accepted in the field.

Hornfit and stuffing size

The standard hornfit size for Hanko size 62 is 36, and the target stuffing size is between 68-69. We know there might and will be local needs, variations, and requirements on bigger or smaller stuffing sizes. Your ViskoTeepak Sales & Technical representative will be able to discuss the available options to ensure a trouble-free stuffing process.

Tailor-made

Size 62 is offered in all Hanko standard color options, with both increased release and adhesion solutions. With multiple meat cling and easy-peel levels combined with numerous converting services and techniques, we have a solution ready to fit any customer's process.
