ViskoTeepak's Tailor-Making Explained: What Does It Mean?

At ViskoTeepak, we believe that just like a perfectly fitted tuxedo or a custom-made wedding dress, our casings should be tailor-made to fit our customers' needs perfectly. But what does tailor-making mean when it comes to sausage casings? Let us walk you down the aisle of customization and show you how we tailor our casings to make our customers' lives easier and more productive.

The Seven Pillars of Tailor-Making Wienie-Pak Casings — the bridegroom's speech by Filip Veselka

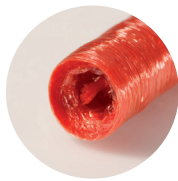

At ViskoTeepak, we believe that our approach to tailor-making Wienie-Pak casings is like the essential elements of a successful wedding party. Each of the seven pillars represents a key aspect that ensures everything fits together seamlessly, creating a memorable and perfect celebration for our products and your needs.

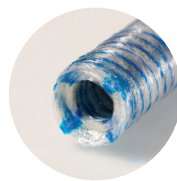

1. **Calibers:** We offer a range of casing sizes and recommended stuffing diameters to ensure every sausage is perfect — think of it as the Goldilocks principle for sausages: not too big, not too small, but just right.
2. **Construction:** Whether you need elastic, standard, stiff, or casings designed for twist linkers, we've got the perfect fit for your sausages, just like choosing the right wedding attire for the big day.
3. **Color & Stripes:** Our casings come in appetizing colors or stripes for product identification and peeling control, ensuring your sausages are as stylish as the bridal party.
4. **Shirring:** We pleat and compress lengths ranging from 28 to 230 feet into strands of 15 to 58 cm, ensuring they are as neatly organized as the seating arrangement at a wedding reception.
5. **Converting:** We offer specialized converting processes tailored to your needs — think of it as having your casings custom-fitted by a top-notch tailor.
6. **Packaging:** We provide pallets, boxes, and casing bundles designed according to your specific needs, ensuring everything arrives as neatly as wedding gifts at the reception.

Push-Pak (CE-PP)

Knotted end (CE-KN)

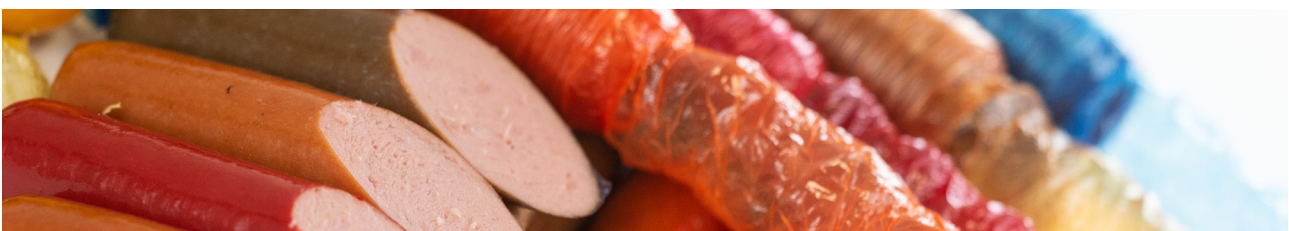

Open end (OE)

Closed end (CE)

7. **Closures:** From Push-Pak and Closed end for reliable stuffing and easy stripping, to knotted and open ends, we cater to every machine type and hand-stuffing requirement, much like the perfect fastenings on a bridal gown.

By focusing on these seven pillars, we ensure that every casing we produce is perfectly matched to your specifications, creating a harmonious and successful partnership.

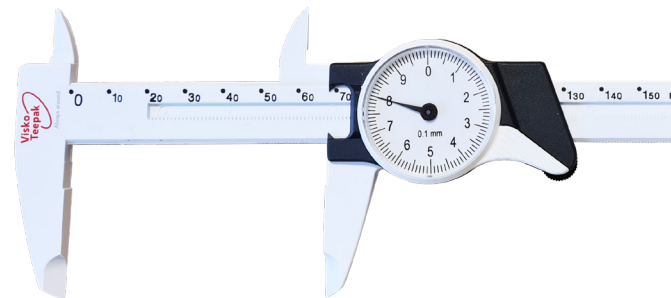

Examples of Tailor-Making Fibrous Casings — the best man’s speech by Wim Bos

ViskoTeepak stands out in tailor-making fibrous casings because we focus on making our customers’ processes smoother and more efficient without demanding big investments. Our technical sales support team is exceptional at understanding the equipment our customers use and the challenges they face. Here are a few ways we customize our products to help:

- **Peeling Issues:** If our customers have peeling problems, we add a peeling solution during shirring at various levels, so they don’t need to worry about peeling and no need to soak the casings — like a pre-wedding beauty treatment for sausages.
- **Longer Production Time:** We can add more meters into a strand, allowing longer production periods without interruption, just like extending the wedding reception for more dancing.
- **Better Sausage Quality:** We make the inside hornfit bigger to improve sausage quality and avoid smearing during production — think of it as adding a bit more room on the dance floor for a smooth twirl.
- **Printing Support:** Need to change printing designs? We provide extensive support to save time and hassle, just like a wedding planner handling last-minute details.
- **Casing Handling:** If there’s trouble opening the casing, we offer training on how to use it best — consider it as the first dance lesson for perfect moves.
- **Logistics:** To ensure production goes as planned at the customer, we might propose alternative casings with the same characteristics but different colors in case the requested casing is not available- like a quick change into a reception dress.
- **Packaging:** We can tailor packaging, like using boxer packs, to suit production areas where cartons aren’t allowed, just like packing a honeymoon suitcase with care.
- **Surviving Tough Conditions:** For heavy mold conditions, we deliver products that can withstand the environment, much like waterproofing wedding day shoes for a rainy forecast.
- **Complaint Resolution:** If there’s a complaint, our technical team offers 100% support, and we quickly ship replacement materials to minimize disruptions — imagine having a wedding planner on speed dial for any hiccups on the big day.

Tailor-Making Philosophy: The First-Class Fit — the father-in-law’s speech by Willy Böhme

Think of ViskoTeepak’s tailor-making philosophy like crafting a first-class suit or a custom wedding dress. We deliver our “clothes” for sausages and ham products perfectly fitted for each unique body, in the best size and color, ensuring top performance. Imagine:

- Exclusive conversions for different needs, like extra stripping during summer to reduce sweating — keeping sausage clothing open and most comfortable under hot pressure like a bride in a summer wedding.
- Proper adhesion levels for the best optical properties — making sure sausages look picture-perfect for the grand event.
- Ideal EP levels for smooth “undressing” activities — because after a fantastic wedding day, everything should go smoothly.

In short, ViskoTeepak has the people and skills to listen to customer needs and create custom solutions. Our tailor-making approach emphasizes precision engineering and custom solutions, ensuring our products fit seamlessly into their processes and deliver maximum value. Here’s to a future filled with perfectly tailored casings that make every sausage a star — just like the happy couple on their wedding day!

Always around
